

THERMOMETER

Battery operated handheld digital thermometer. A built-in microprocessor stores, calculates and compensates for K, J and T type thermocouple probes. The unit has a waterproof IP67 case. The touch mode keys are highly reliable with tactile and audio feedback. This meter uses four "AAA" batteries. The resetting of parameters is not required when power is restored.

The front of the meter has a large LCD that displays temperature and time/date simultaneously along with user prompts and thermocouple type indicator.

The unit is also equipped with a non-volatile memory allowing the user to store 50 different sets of readings. This unit will assign a site number for each set of readings stored, so the user can review the data easily.

Specifications:

Dimensions: 7.62cm x 15.24cm x 3.81cm
